UTTICE ACI	tion Summary F	Part of Paper No./Mail Date 20040526						

Applicant's election with traverse of species II in the reply filed on 6/28/04 is acknowledged. The traversal is on the ground(s) that species II and species II overlap. This is not found persuasive because species II requires the engine to be in a predetermined start up state prior to controlling the high pressure control valve. Species III (claim 3) requires only detection of an absolute value of pressure variation in the fuel system—which can occur during any engine operating state.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2 and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. These claims recite "a high pressure solenoid valve provided in an area from the high pressure pump up to the injection nozzles". However, this valve location is not shown in the drawings and therefore the location of

the valve in these claims is unclear.

Application/Control Number: 10/677,268

Art Unit: 3747

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 2 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by

Kunishima et al (RE 36,119) The reference discloses an apparatus and a method

of operating a fuel injection system for an engine at startup having the claimed

elements including a first and second solenoid control valves for controlling fuel

pressure during startup of the engine.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See the cited art showing fuel systems having solenoid valves utilized to control fuel pressure at start up.

Application/Control Number: 10/677,268

Art Unit: 3747

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas N Moulis whose telephone number is 703 308-2618. The examiner can normally be reached on M-Th.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry Yuen can be reached on 703 308-1946. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
